# Respirator Fit Testers For The Real World™

AccuTec-IHS was created in 2016 to focus on a single mission – develop a new Quantitative Respirator Fit tester using the proven ‘Gold Standard’ CNC Particle Counting Method. Our goal from Day One was to give the Respirator Fit Testing community an innovative and easy-to-use alternative to the same old products that have been occupying the industry for decades.

Founded by scientists and technicians with extensive real-world RFT experience, we sought out expert instrumentation developers with deep expertise in precision particle counting methods to develop the AccuFIT 9000®. This ensures that our product can test virtually ANY respirator including the NIOSH N95 ‘disposable’ types which are now so essential to the COVID-19 pandemic response efforts.

Starting with a ‘clean sheet of paper’ and a fresh perspective on how professionals in Industrial Hygiene, Occupational Health and related disciplines could operate more effectively, the team addressed some of the known shortcomings of other products - and came up with a device that meets the Fit Test needs of virtually every Respiratory Protection Program around the world. Features like a high-visibility 7” touch-screen interface, ‘Stand Alone’ or PC Operation and the ability to control up to four units from a single PC with independent start/stop times ensures whatever your preferred mode of operation, you’ll have maximum control and better throughput when the minutes matter!

Going beyond outstanding product features and performance, the true value of AccuFIT lies not just with the product itself, but with the core values and corporate culture of the AccuTec-IHS team. The primary reason for creating AccuFIT was to provide us the opportunity to be of service to those dedicated professionals like yourself - who are trusted with the responsibility to ensure the health and well-being of real people wearing respirators in the most severe and hazardous environments.

Our satisfaction comes from knowing that we are here to be your support team, to back you up when the going gets tough and the demands on your time become greater than ever. This is even more true today than it has ever been in the history of the Industrial Hygiene and Occupational Health professions - and as we all adapt to meet these most challenging times head-on, our pledge to you is this: we’ll do whatever it takes to make sure you are satisfied with your Respirator Fit Test experience. Our team of dedicated RFT and Instrumentation Experts will help get you through the day (or night) even when it’s full-on ‘crunch time’ and there’s no margin for error.

With a complete line of accessories optimized for the most demanding conditions, comprehensive service and calibration capability throughout North America (and beyond) and technical support from a dedicated network of industry veterans, we make sure that your ‘uptime’ is maximized, and you can get what you need

when you need it. Add in our 3-year warranty and overall low-cost of ownership, and we believe you’ll agree we have largely fulfilled our mission.

We say we focus on one thing – having the best solution for Quantitative Respirator Fit Testing – and we live it through knowing what we’re doing and by knowing WHY we’re doing it – we are very grateful for the opportunity to be of service to the Industrial Hygiene community during a time when Respiratory Protection Program effectiveness is so critically important. It’s this ‘singularity of purpose’ that sets the AccuTec-IHS team and its representatives apart from the rest.

Our goal is to help make the world a safer place and preserve the health of as many people as possible. With ‘respirator fit testing for the real world’ and your support and participation, together, we can do it.

## About Us

AccuTec-IHS offers the AccuFIT 9000® Quantitative Respirator Fit Tester for meeting all global standards including the new OSHA Fast Fit protocols. As a full solution including adapters, supplies and software, AccuFIT is packaged in a rugged ‘road-worthy’ travel case and is surprisingly affordable; including a 3-year standard warranty. <http://accutec-ih.com>

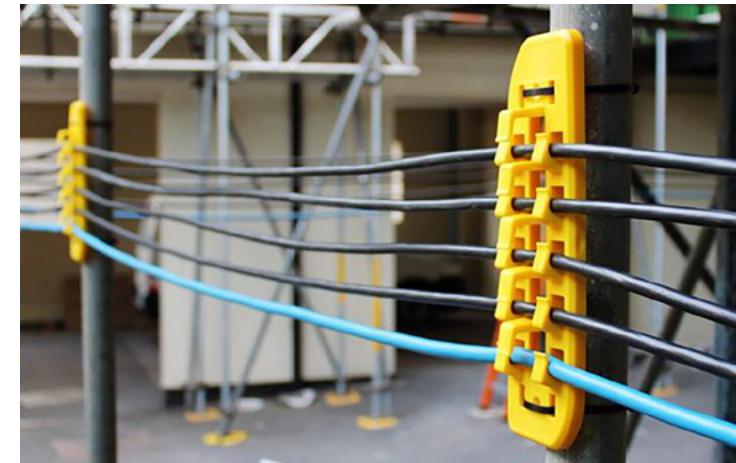

# Mitigate Tripping Hazards in the Workplace

No matter what industry you work in, keeping the workplace in safe operating condition is vital in preventing injuries. In fact, most job site accidents are caused by a slip, trip, or fall. Because there could be hazards at every turn, you can't know for certain when the next accident will occur. However, you can take proper steps to promote a safe working environment.

How are you combating tripping hazards? The common solution has been to use zip ties or duct tape alone to secure cords, hoses, and cables to railings or conduit. Doing so may get the job done but it is considered a permanent mount by OSHA Standards and could be a violation in certain applications. In addition, using ties and tape can cause damage to the lines when cutting to remove. To provide an alternative solution to tape and ties, Glove Guard LP offers multiple styles of hooks that elevate and secure cords while also keeping them in safe operating condition.

The OktoLock® clip is one method that safety professionals are using to help combat tripping hazards. This robust and versatile clip is used to improve job site conditions by elevating cords, hoses, and cables off the ground and moving them to a safe location. Because the OktoLock® clip is so compact, light, and fits multiple applications, they are an excellent tool to have on hand just in case. Although the clip may seem small and simple, it serves a huge role in reducing trips and falls on the job site. Manufactured in the USA, the OktoLock® clip is made out of a non-conductive, PC-ABS material giving it ultra-flexibility and a tough load rating of 75 pounds.

In cases where the OktoLock® clip is either not big or strong enough to elevate your large, heavy, or multiple cables, the CableSafe® safety hooks are a perfect alternative. These ultra-strong, multi-sized, and easy to use hooks help manage larger air hoses and cables

to keep the workplace in a safe operating condition. The open-ended design allows for quick, one-handed installation, while still providing up to a 340 pound load rating from the glass-filled polyester material. The CableSafe® safety hooks are multi-purpose and can be removed and re-used at another site.

The Cable Rail is also an innovative system to temporarily manage cables. The unique hook arrangement allows cables to be easily loaded in and held tight between two Cable Rails, spaced up to 15 feet apart. Multiple Cable Rail mounts can be used for longer runs around the workplace. With its flat base, the Cable Rail is easily mounted with screws or cable ties to walls, poles, or columns. The Cable Rail is robust enough to handle rigorous use in challenging environments while also providing an economical solution to industrial cable management and safety. When the job is complete, the Cable Rail can be removed and transferred to the new location.

# Enhance Safety with Virtual, Highly-Visible COVID-19 Signage

Our virtual sign bundles provide everything you need for easy and cost-effective signage projection for general safety or COVID-19 prevention. Unlike paint or adhesive, the bright, bold projections won't wear or fade or be overlooked in dim or busy settings. Go virtual for highly visible, durable, and movable signage.

## WHERE VIRTUAL OUTPERFORMS PAINT AND ADHESIVE

There are three primary options for this signage—paint, adhesive, or virtual—but we strongly believe that in most cases, other than daylight conditions, virtual performs best. In the current situation, paint may be too permanent a solution for COVID-19 signage.

Adhesive signage, while less permanent than paint, is still hard to remove and will wear away and become dirty with foot and/or vehicle traffic. Finally, they're often overlooked in low lighting or busy settings. Virtual signage, however, overcomes all of these obstacles, providing highly-visible, durable, and easily movable signage for any work environment.

## EASY TO INSTALL AND MODIFY

Virtual signage is easy to install, only requiring a gobo projector and gobo. The projector can be mounted on the ceiling or on a wall, or set on a shelf for easier access. Once installed, the projector requires little to no maintenance, providing significant cost savings over time. Your virtual signage gobos can also be used again and again and are easily moved to wherever signage is needed—simply redirect the projector for adjustments or move it for new signage placement. Lastly, virtual signage requires no additional lighting to stand out in poorly-lit environments. Dim to dark settings is where virtual signage (literally) shines.

## READY-MADE COVID-19 SIGNAGE FOR FAST AND EASY COMPLIANCE

Use **ready-made COVID-19** signage to remind workers and visitors to follow CDC guidelines. With the proper gobo projector, these signs can be projected indoors and outdoors (in shady conditions out of direct sunlight), on most surfaces, and in almost any size to fit your space.

## ES-C20PC Sign Projector with Virtual Social Distance Sign Gobo

## Social Distancing Sign Bundle - C20PC

We've put together affordable **turnkey projector-gobo bundles** to ensure you have everything you need to easily display your safety signage. These bundles are both convenient and customizable, allowing you to select your preferred size of sign and installation distance while we do the rest.

## CUSTOM SIGNAGE FOR BRANDED IMAGES AND MESSAGING

**Custom signage** is a great way to incorporate your branding into your safety messaging. Designing your own COVID-19 safety signage can help make your space feel more inviting and maintain the atmosphere you worked so hard to create for your patrons. Using your brand's colors and fonts is a simple way to customize the signage without distracting from the safety reminders. You can submit your own artwork or have our team design custom signage for you based on your specifications.

# Work Shouldn't Hurt

Stop-a-Ladder keeps extension ladders from slipping out from under you while on synthetic, or slippery surface. It has open cell foam on the bottom that works like little suction cups. It works even on wet surfaces and has a strap to easily attach to the bottom run on your ladder and comes with a plastic case.

Ergokneel Handy Mat is our 1' thick closed cell foam kneeling mat. It is 14' x 21" and is made primarily of rubber NOT plastic like most of the others. It will stay an inch thick, and will not get hard and brittle like the others do.

Extreme Standing Mats are a full one inch thick and provide enough cushion to allow long worth shifts without back or leg pain. It is closed cell foam rubber so very durable and water proof. You will not need to stack these mats to get enough cush! Bright yellow or Office Gray safety stripes available.

Softknees are inserted into the double knee in workwear such as Carhartt, Dickies, Big Bill, and more. The roll up and slide up, go through the washer and dryer so no having to mess with rounding up and strapping on your knee pads! They are already there when you need them.

 **Working Concepts, Inc.**

# Leaders In SAFETY

## 2020 Leaders in Safety Companies

Workplace Material Handling & Safety would like to thank each of these companies for participating in our 2020 Leaders in Safety program.

Visit these Leaders and learn more about them at [www.workplacepub.com/leaders-safety/](http://www.workplacepub.com/leaders-safety/)

**About Us**

DAK Equipment & Engineering develops warehouse solutions for companies in Chicago and across the United States. Our automated material handling solutions and warehouse equipment help companies streamline their warehouses, using their space and their human resources more efficiently.

DAK Equipment & Engineering is a premiere material handling systems integrator based in the Chicago area. DAK was started in January of 1995 by David Kenealy with the commitment that every step we take must move our customers closer to their business goals.

**OUR OBJECTIVES**

- Supply quality equipment and value-added solutions
- Provide excellent customer service
- Focus on what we do well
- Build ongoing and long-lasting customer relationships
- Sell our warehouse products and services based on value, not price

2020 marks 25 years of excellence providing warehouse solutions, best-in-class material handling equipment, warehouse safety equipment, and industrial warehouse supplies to our customers.

**K3 WERKS SAFETY & PROTECTION PRODUCTS**

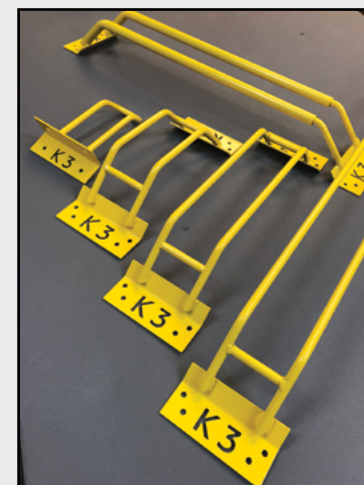

Since we have a warehouse of our own, we understand that safety is the most important ingredient of a cost effective, productive warehouse. Our safety products and solutions are designed based on our own experience and offered with the confidence that our products will safeguard your employees, facility, and inventory. DAK's K3 WERKS premium line of warehouse safety and protection equipment includes row guards,

column guards, pallet stops, and large equipment guarding.

As a material handling system integrator, we see first-hand the result of wear and tear on warehouse equipment over time and the catastrophic impact damaged rack and broken sprinkler heads can cause to your facility, inventory and employees. No one can afford the cost of personal injury, loss of inventory or a facility shutdown for clean-up. We are proud to provide safety and protection products to prevent these disasters.

**K3 WERKS IN-RACK SPRINKLER GUARDS**

This year is exceptionally exciting for DAK because we have added In-rack Sprinkler Guards to our K3 WERKS Safety & Protection line. One of the most significant means of ensuring warehouse safety is installing sprinklers throughout the facility to protect against fire. In-rack sprinklers are a great alternative to ceiling-mounted sprinklers because they are installed throughout the racking, positioning them closer to the source of the fire, therefore requiring less water to extinguish the fire. One downside to in-rack sprinklers is the constant danger of sprinkler heads getting damaged or even broken by employees, contractors, heavy equipment and fork-lift impact, which can result in gallons of water dumping onto inventory and equipment. Our

in-rack sprinkler guards attach directly to the beams and prevent heavy equipment getting anywhere near sprinkler heads, protecting equipment and inventory from unnecessary water damage.

We designed these sprinkler guards with 25 years of warehouse solution experience under our belt and we are proud to say there is no other product on the market like them! Learn more at [dakequipment.com/k3werks](http://dakequipment.com/k3werks).

## PURE SAFETY GROUP: Leading the Way in Keeping Workers at Height Safe Around the World

### About Us

Pure Safety is the largest independent manufacturer focused solely on fall protection, created to service the broadest range of individuals working at height. Innovative products backed by the best customer service in the industry. We work hard to create customer-driven solutions that solve the complex problems that workers encounter on the job every day.

Thousands of workers at height around the world will return safely home today to their friends and family, because they were wearing and using products made by Pure Safety Group (PSG). PSG is the global fall protection leader – the only independent equipment manufacturer to be 100 % -focused on keeping people safe while working at height. The company's sole focus on fall protection lets it concentrate exclusively on the needs of workers at height, and the supervisors and safety managers that choose products and training to support their teams. PSG is driven by innovating

equipment that enhances worker safety and comfort, whether that be through small design iterations or major product breakthroughs. By listening closely to customer needs, bringing new ideas from other industries, testing products, and providing insight on safety standards, the PSG innovation team has more than 200 patents to its name. This innovation continues to advance the fall protection industry in ways that keep workers as safe as possible, every day on the job.

PSG fall protection products are sold by distributors throughout the world and used in general industry and the construction, oil and gas, energy, utilities, telecom, mining, and transportation industries.

PSG offers a full line of equipment, including harnesses, lanyards, lifelines, anchors, netting, gates and more, in addition to dropped objects prevention products, to protect people and infrastructure below workers at height. Dropped object products include tool tethers, anti-drop tool transportation and storage containers, and the company's new Stronghold® Quick-Switch® system, which enables the successful hand off of tools among workers because the tools are 100 % tied-off at all times.

Fall protection safety also extends to workers below ground, such as in confined spaces. PSG equipment used by workers in applications in the utility and mining industries include descenders and rescue equipment such as winches and tripods for lifting workers to safety.

PSG's fall protection training happens at its state-of-the-art training centers in Houston, Texas, and the U.K., and its engineering and onsite consultation for unique or complex client projects takes place at worksites around the world.

The PSG family of product brands include

- Guardian® Fall Protection, PSG's professional safety line. Guardian products meet compliance requirements while offering great quality and value.
- Checkmate®, the company's high-performance line, the premium category chosen by customers wanting to enhance safety with products that incorporate the latest advancements in design and technology.
- Stronghold® dropped objects prevention products.

All PSG fall protection products meet or exceed OSHA, ANSI standards and many are EN and CSA-compliant in Canada.

## Evaluate Your Organization's COVID-19 Response With Help From J. J. Keller

### About Us

J. J. Keller is the trusted source for DOT / Transportation, OSHA / Workplace Safety, Human Resources, Construction Safety and Hazmat / Hazardous Materials regulation compliance products and services. J. J. Keller helps you increase safety awareness, reduce risk, follow best practices, improve safety training, and stay current with changing regulations.

**J. J. Keller & Associates, Inc.**  
3003 Breezewood Lane  
P.O. Box 368  
Neenah, WI 54957  
1-800-230-4094  
sales@jjkeller.com  
www.jjkeller.com

Employers have taken extraordinary steps to deal with the COVID-19 pandemic. Whatever role you play in these efforts as a safety manager, remember to continually evaluate actions you and your company are taking. Even while a crisis is ongoing, making notes about potential issues and challenges will better prepare you for a post-emergency response evaluation.

At some point, your company will likely meet to evaluate what was done well, what could have been done differently, and what plans are needed to prepare for the next event. This analysis should include individuals with a strong understanding of emergency response actions, which likely includes the safety manager.

The evaluation may involve having others examine your decisions, so expect to receive some

constructive feedback. Analyzing how you made decisions will help prepare for this. In addition, you'll likely provide feedback on how others performed, so plan to do so diplomatically.

### QUESTIONS TO CONSIDER

The format of a post-emergency evaluation will differ for each company, but some questions that might be asked will likely include the following:

- Was the scope of the situation understood, or did it continually develop? As new information became available, how quickly did the company respond?
- What steps were taken to evaluate the accuracy of available information? Was there a process for taking action based on incomplete data?
- Were delays caused by getting key decision makers together? What actions were managers below executive level authorized to take? Were requests considered in a timely manner?
- How quickly were decisions communicated throughout all levels and locations? Was key contact information available and current?
- Did the company look to existing plans or policies? Were the plans current and available to key individuals? What changes may be needed for greater flexibility (such as adding multiple response options based on severity)?
- Were resources allocated efficiently? Was anything critical overlooked? What resources are needed (or can be gathered) to prepare for the next event?
- What alternative suppliers were considered, and are there contingency plans if those alternatives are not available?
- Did the company seem to take a reactive approach, or was a long-term goal developed?

You cannot know the nature or severity of the next event, but you can be certain that another event will occur. Evaluating how

well the company responded to this crisis, and evaluating what changes are needed, will better prepare the organization to get through the next situation.

### HOW WE CAN HELP

The J. J. Keller® **SAFETY MANAGEMENT SUITE** — the newest addition to J. J. Keller's growing family of world-class cloud solutions — is a must-have for safety professionals at any level. Developed using real-world insight from industry leaders across the country, this ready resource delivers round-the-clock access to all our most popular safety management tools, including a wide range of expert pandemic management resources. To learn more, visit [JJKeller.com/safety.com](http://JJKeller.com/safety.com).

### About Us

Showa' means "finding a balance between different elements" in Japanese. This principle is much more than just a formula; it is at the heart of our approach and requires full control of all stages. SHOWA is the only company that fully controls the design and manufacture of its protective gloves. Every day at SHOWA we continue to innovate to provide each wearer with a product that meets expectations. This autonomy, impervious to competitor methods and concepts, is based on constantly surpassing what has been done before, ensuring that everyone enjoys comfort and optimum safety.

### SHOWA USA

579 Edison Street  
Menlo, GA 30731, USA  
800.241.0323

[USA@SHOWAGroup.com](mailto:USA@SHOWAGroup.com)  
[www.showagroup.com](http://www.showagroup.com)

SHOWA is renowned for both quality and innovation. Our technology has forever changed our industry, what our hands are capable of and the impact we make on our environment. We have achieved this by utilizing the latest resources in technology, understanding PPE standards, and assuring our customers that we will not settle for anything less than the highest level of quality hand protection, every time. This foundational belief is one of the major reasons that SHOWA's products are well-known, respected and worn by millions of people around the world. We pioneer the quality, performance and protection to give ordinary hands extraordinary abilities.

The name of our new technical innovation used in the liners of our DURACoil products comprises of 2 words:

1. DURABLE = the gloves are designed for maximum comfort, to be worn for extended periods of time for a wide range of medium-low risk applications

2. COIL = the wrapping technique where fibers are

coiled around the other in layers, thereby increasing the level of resistance.

The DURACoil liner is engineered by tightly wrapping multifilament polyester around a cut resistant fiber, then reinforcing it with High-Performance Polyethylene, also known as HPPE. The technique is very important to user comfort; if not done correctly, the fibers will irritate the skin. This therefore creates a premium lightweight yarn that offers comfort, durability and an increased cut protection.

Our robust investment in research and product development is readily adapted to users' needs and the shifts in global demand for new and innovative products. Over 100 researchers, designers and engineers devote their energy to developing new models in close synergy with production sites and customer needs. Every prototype is tested under real conditions on our customers' sites. The active cooperation of all these actors in this cycle demonstrates our commitment to constantly seeking perfection. From engineering

## ALWAYS INNOVATING. NEVER IMITATING

to end use, our gloves are created better to perform better.

## The Nation's Leading Supplier of Physical Safety Products

### About Us

Omega offers safety barrier type products designed to protect people, machinery, building walls, shelving, racks, doors, finished product and more. The company was founded in 1987 and has a nationwide dealer network.

OMEGA Industrial Products has been the nation's leading supplier of physical and industry safety products since 1987. Our industrial safety products are expertly designed and manufactured to optimize safety and increase your facility's productivity in a wide variety of job sites, manufacturing and distribution operations.

OMEGA supplies many of the world's leading companies, government agencies and institutions with protective equipment to keep employees and workplaces safe. A variety of customizable guards, rails and shields make workplace rules clear and

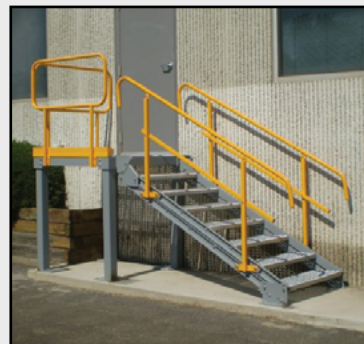

accommodate important safety codes and laws. Every one of our products is made with structural, top quality materials to withstand hazardous environments, heavy machinery and frequent in-plant traffic. We strive to create a safer workplace, reduce employee injuries and create a more safety minded workplace for all.

Omega's full line of safety barriers and guarding products will help you create a safer environment, reduce employee injuries and improve productivity.

Protect your most valuable assets - people and equipment - with solutions that have been time tested and proven in real world applications.

### TRAK-SHIELDS / Z-GUARDS

The overhead door guards provided by Omega Industrial offers the best protection against fork-lift and other heavy duty equipment related accidents, impacts, and damage.

### SAFETY BARRIER GUARD RAILS

Safety Barrier Guard Rails protect people, walkways, machinery and buildings from collisions. The safety guard rails provided by Omega Industrial Products are constructed from the toughest steel and provide non-penetrable support and protection.

### DOWNSPOUT - PIPE GUARD

Manufactured to eliminate damage to your plumbing, mechanical and electrical equipment mounted to building columns and facility walls. Available in wall mount and column mount versions with an attractive, highly visible Traffic Safety Yellow, the Omega Downspout Pipe Guard / Pipe Guards heavy-duty construction protects your facility and personnel from injury or damage to vulnerable power, supply and mechanical lines.

### OMEGA RACK GUARDS

Constructed with built-in Heavy Duty design, and radius ends to keep traffic away from critical rack supports. Available in stock sizes from 26" to 48", Rack Guards are but one type of the many Safety Barrier / Guardrail

type products offered through Omega Industrial Products.

### R.U.F (ROLL-UP-FENCE) PORTABLE BARRIER

Omega Industrial Products is introducing a new, first of its kind pedestrian safety barrier in the US: the R.U.F (Roll-Up-Fence) is an innovative solution to protect dangerous work sites and pedestrian traffic zones. This patented product saves time and money for contractors, public works projects, and event coordinators. Anywhere pedestrians need to be directed or segregated from hazardous work zones.

Call OMEGA today to find out more about how our products can keep your workers safe and secure.

**About Us**

We Improve Efficiency  
While Safeguarding  
People, Product, and  
Infrastructure in  
Hazardous Conditions

ILC Dover is a world-leader in the innovative design and production of engineered flexible protective solutions for pharmaceutical and biopharmaceutical, flood protection, personal safety, bulk packaging, and aerospace industries. The Company's visionary solutions have improved efficiency while safeguarding people, product, and infrastructure in hazardous conditions since 1947.

With protection at its core, ILC Dover's personal safety division is integral to the Company's strategic objectives and mission, concentrating on mitigating the risks of exposure to airborne pathogens, infectious diseases, and active pharmaceutical ingredients with personal protective equipment (PPE).

ILC Dover provides NIOSH-approved flexible personal protective equipment for hazardous conditions. Its solutions for government, pharmaceutical, and healthcare workers include powered air purifying respirators (PAPRs) and respirators, which are designed to help EH&S managers deploy simple and powerful protection for

everyday safety and productivity. ILC Dover's personal safety solutions include:

- Escape Respirators
- Pharmaceutical PAPRs
- Infectious Disease PAPRs
- CBRN PAPRs
- Asbestos Abatement Products

**A RISE TO LEADERSHIP**

ILC Dover responded rapidly to the recent shortage of PPE during the coronavirus outbreak in the United States by innovating its PPE products and manufacturing processes. The Company deployed its R&D team to design a PAPR hood for workers on the frontlines and expedited the regulatory approval and manufacturing processes. The new healthcare respirator is called Sentinel EZ BioHood™ and works with ILC Dover's Sentinel XL® blower system. The main benefits of Sentinel EZ BioHood™ include:

- Superior Personal Protection Equipment
- Easy to Clean
- No Fit-Testing Required for Wearers
- Easy to Store
- Comfortable to Wear for Long Operations
- Wide Range of View

Beyond comfort and ease-of-use, the hood offers 100x the protection of an N-95 mask, providing superior respiratory protection to healthcare workers and enabling them to provide continued care. The launch of Sentinel EZ BioHood™ to the marketplace demonstrated responsibility, innovation, and

rapid mobilization in a time of crisis, contributing to ILC Dover's recent rise to leadership in the PPE industry.

**A HISTORY OF RELIABLE PROTECTION**

When ILC Dover initiated its R&D on the first spacesuit concepts in the 1950s, the Company already had considerable experience working with advanced flexible materials and joining techniques to create high altitude pressure suits. Unlike these suits, ILC Dover's objective for the first true spacesuit went well beyond survival protection. The Company wanted to create a product that protected astronauts while they walked and worked on the moon. ILC Dover's solution, the A7-L pressure suit, not only provided a life-sustaining environment for astronauts but permitted maximum mobility and could be worn with relative comfort for up to 115 hours.

Today, the spacesuit has become synonymous with personal protection—and symbolic of a passion that ILC Dover has pursued for decades. This legacy is fully represented in by ILC Dover's family

of personal safety products which incorporate leading-edge flexible materials and advanced film technologies. Namely, ILC Dover's personal safety solutions offer mission-critical protection while providing the highest levels of comfort and mobility to keep workers productive.

## All Star Incentive Marketing

## About Us

For nearly 50 years All Star Incentive Marketing has provided its clients with solutions that help maximize the value of human capital. By providing world-class employee engagement solutions in the form of recognition and reward programs, All Star is able to motivate behavior change and, in the process, create more effective and loyal employees and customers. When deployed with employees, these programs improve safety, wellness, retention, sales, training, customer service and communications. When deployed with customers, these programs improve customer retention, sales, and profitability.

## All Star Incentive Marketing

660 Main Street,  
P.O. Box 980,  
Fiskdale, MA 01518  
800-526-8629

[info@incentiveusa.com](mailto:info@incentiveusa.com)  
[allstarincentivemarketing.com](http://allstarincentivemarketing.com)

Are your companies' employees its greatest asset? Please consider the question before answering, because many companies say they are, but they do not act accordingly.

If you are in a safety-related leadership role, and you believe that they are the greatest asset, then your top priority should be to protect that asset by constantly looking for new and better ways to keep them safe, healthy, and engaged. This should be happening all the time so that they can perform at an optimum level during normal times, and it is even more important

to have in place when your company is dealing with high levels of uncertainty and radical change. There is **nothing more important** to the success of an organization and very often it is the safety team that needs to make it a reality.

All Star Incentive Marketing works with companies to create a safe, positive, and healthy work environment by generating higher levels of employee engagement by creating recognition/rewards programs that improves communications and creates bi-directional conversations between employer and employee. It may sound farfetched, but only if you have never tried it. Once you deploy such a program, you'll wonder how you were able to accomplish any behavior change without it.

Ongoing recognition for your employee's dedication and performance, coupled with positioning employee health and safety at the forefront of your operations is not only a sign of strong leadership but also smart business that can dramatically lower costs.

Through world-class employee engagement solutions in the form of reward and recognition programs, All Star can motivate behavior change and, in the process, create more effective and loyal employees. From workplace wellness, safety, and years of service to employee appreciation/loyalty and peer to peer recognition, All Star provides reward and recognition programs to address your business challenges and drive employee performance.

### About Us

Primarily known throughout its history as a “custom sign” manufacturer, Accuform continues to expand due to a dedicated workforce and a quality product line.

As the world around us continues to change, effectively communicating safety and health policies and regulations is paramount for every business. The new challenges and demands are all too familiar as we navigate this new normal together.

But amid the chaos, one thing that will never change is our freedom to choose to work safely.

Every individual, employee, and company is empowered to take a stand for others' health and safety. Choosing not to compromise on health and safety is one of the most remarkable displays of caring and a genuine demonstration of leadership. It's what drives Accuform in its quest to be your preferred safety identification supplier. Our commitment to

inform, protect, and motivate the global workforce is unwavering.

While we started with safety signs in 1976, Accuform continues to be the industry leader in facility identification products. We offer expertise and ingenuity to produce quality products and develop solutions to keep safety top of mind.

With a passion for cutting-edge digital printing technology, we produce a scope of products for industries ranging from manufacturing, construction, mining, transportation, healthcare, and food & beverage.

Our diverse product selection includes OSHA & ANSI Safety Signs, Labels, Tags, Pipe Markers, 5S Workplace Organization, Lockout/Tagout, Barriers and Barricades, Safety Scoreboards, Banners & Posters, Traffic Control, and pandemic solutions.

We lead through innovation with the continuous introduction of brands exclusive to Accuform: Digi-Day® STOPOUT®, Store-Boards™, BLOCKADE™, and Tags By-The-Roll, Tough-Mark™, Accu-Shield™, Duck Armor™ Liquid Laminate, and more trusted brand names.

With a world-class customer service team, we dedicate ourselves to becoming your favorite supplier. Accuform is ready

## Accuform – Your Trusted Partner in Safety

to meet your needs and create a WOW! experience with every transaction.

### OUR PROMISE TO OUR DISTRIBUTORS:

- World-class customer service team provides a quick, smooth, accurate experience
- Competitive leading-edge products
- OSHA-10 Certified inside sales team
- Same-day shipping for in-stock items
- No minimum order value
- Sophisticated web-based solutions to keep you up-to-date
- Industry knowledge and regulatory expertise to make you a thought-leader

### About Us

At Gorbel we have a comprehensive line of Crane Technology products, Ergonomic Lifting products and, a line of Tether Track Fall Arrest Safety Systems.

Gorbel's mission is simple: They improve people's lives. That mission guides everything they do, from the products and service they provide to their outside customers to the tools we create for their sales force and the work environment we foster for their employees. Since the beginning, Gorbel has been providing overhead material handling equipment solutions that are A Class Above in quality, reliability, performance and safety.

Gorbel was founded in 1977 by Dave Reh. "My vision was to build a company with 10-15 employees, with a specialty product valued by customers," said Reh. "This would enable me and employees to function in a respected, low stress business environment. I love building physical, organizational, and personal things. I'm proud of building Gorbel, which

has provided so much opportunity for personal growth for myself and all its employees."

Gorbel is dedicated to improving safety and productivity in every industrial environment. Their engineered and mobile systems can be tailored to your specific industrial application—whether it's indoors or out, stationary or at multiple locations. Today, Gorbel uses proven concepts to develop unique solutions for protecting workers at heights. By matching the right system to your exact job requirements, they offer superior safety while keeping productivity at essential levels. Whether the job requires protection throughout the day as part of production, cleaning, or painting activities, or just for sporadic activities, Gorbel offers a full line of fall arrest solutions that you and your workers will embrace.

## GORBEL INC.: We Improve People's Lives

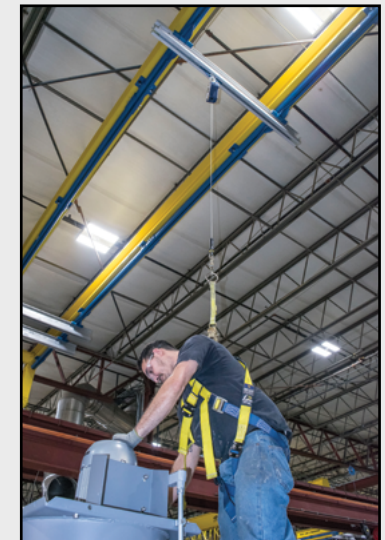

To address unique challenges faced while trying to protect your workers, Tether Track is available in a variety of engineered and mobile configurations suitable for every indoor and outdoor application. All rigid rail systems described here are designed for components that are rated for the industry standard 900 pounds maximum arresting force (MAF). Since each system has unique characteristics, problem-solving is addressed at various levels, starting with onsite consultations with a knowledgeable dealer or representative. From there, Gorbel's team of customer service representatives and fall protection product specialists are on hand to assist in providing the exact system to meet your needs.

Gorbel's engineering team provides custom solutions for a wide range of activities. Dedicated, qualified engineers can provide various options to address applications where "off-the-shelf" devices may be insufficient. Individual welders are certified in accordance with Structural Welding Code AWS D1.1, to ensure that the product you receive is of a consistent, premium quality.

Utilizing Tether Track as part of a complete fall arrest system provides an optimal solution to protect your workers. With so many companies touting strict policies regarding safety, Tether Track is a perfect fit in a safety-conscious

culture. Providing maximum protection for workers at heights with quality equipment designed specifically for the task is reassuring to all levels of the organization.

Keeping your workers safe is Gorbel's number one priority. Whether you're moving materials or protecting workers at heights, the owners of overhead safety have your back. Gorbel cranes, ergonomic lifting solutions and fall protection devices can be found in virtually every industrial environment, elevating safety, productivity and profitability.

## HafcoVac Air-Powered Industrial Vacuums

### About Us

HafcoVac is a product line of Hafco Foundry. Hafco Foundry is located in Midland Park, New Jersey. Founded in 1969, Hafco Foundry manufactures and distributes a variety of vacuum cleaner units and accessories that are perfectly adapted to the heavy duty requirements of industrial and machining cleanup.

HafcoVac Air-Powered Industrial Vacuums are designed to be high-performance solution for use within environments where electricity is not available, too dangerous or prohibited for use. Our vacuums are multi-functional, maneuverable, easy-to-use and can be accessorized to meet the needs of any type of industrial cleaning necessary. HafcoVacs safely collect both wet and dry materials and are constructed with no moving parts that can create friction, arcs or sparks. They are also ATEX and NRTL certified for use in the cleanup of hazardous combustible dusts. Many industries have to comply with safety regulations involving combustible materials and the versatile HafcoVac

is both a price and service leader for intrinsically safe, certified, air-powered industrial vacuum cleaners.

HafcoVacs are perfect for use in heavy-duty industrial cleaning for the purpose of recovery of wet and/or dry materials. Using the existing compressed air in your facility, our simple Venturi system can provide up to 5x the power generated by motor driven systems. Since the Venturi has no moving parts it also maximizes operation and minimizes maintenance and all of our Vacuums carry our industry-leading Lifetime Warranty.

Highly portable, Air-Powered HafcoVacs can be used in a multitude of industrial work area spaces. For confined areas that require the removal of combustible and possibly hazardous dusts, our 30-gallon drum may be more effective and for larger spaces and amounts of material to be collected or recovered we offer a 55-gallon capacity drum. HafcoVac Air-Powered industrial vacuums always work wherever electricity is unavailable and within ATEX and NRTL guidelines.

HafcoVacs are engineered and manufactured for maximum efficiency. Using a minimum of air consumption they generate powerful suction 5x more powerful than a equivalent electric motor driven vacuum. HafcoVacs are an industry leading solution for reaching and keeping house-keeping standards within industrial locations. They are also very effective for atmospheres producing dangerous fumes in their processes and facilities that have machines prone to issues related to the production of dust as a by product.

When coupled with our popular Overhead Cleaning Kit accessory, Air-Powered Hafcovacs prevent blow-down and distribution of harmful fumes and materials. Available in 4 different lengths the kit makes cleaning pipes, beams and overhead areas quickly, efficiently, and safely.

Certified, safe, strong, portable, easy-to-use, built to last, and backed by our Lifetime Warranty it is particularly suitable to use within a range of industries while also complying with the directives of ATEX and NRTL.

HAFCO Vacuums are ATEX certified and designed for use in Class I: Division 1, Groups A, B, C and D T6, Zone 1, and Class II: Division 1, Groups E, F, G, T6, and Class III: Division 1 Hazardous Locations as defined in the National Electric Code (NFPA 70). They can be used in a Division 2 hazardous location, providing it is in the same Class and Group.

**About Us**

Superior Glove® is one of North America's leading manufacturers and suppliers of work gloves. A respected source for thousands of customers, Superior Glove® has been in the business since 1910. With four manufacturing facilities, we are able to serve customers globally. Specializing in cut-resistant gloves, we are also licensed manufacturers of Kevlar® and Dyneema® products and other high-quality work gloves for every industry.

**Superior Glove Works Ltd.**  
2345 Walden Ave Ste. 600  
Cheektowaga, NY 14225  
1-800-265-7617  
[business.development@superiorglove.com](mailto:business.development@superiorglove.com)  
[superiorglove.com](http://superiorglove.com)  
[www.superiorglove.com](http://www.superiorglove.com)

For over 100 years, Superior Glove has been guided by one vision: To be a driving force in eliminating workplace injuries through education and the innovative, intelligent design of safety apparel.

From humble beginnings, Superior Glove now offers over 3,500 different styles of safety gloves, protective sleeves, and other safety apparel. While we've come a long way, we've never forgot our roots and continue to run the business by the three values set out by our founder, Frank Geng:

- Family Environment – Cultivate a positive family environment
- Worker Focused – Ensure workers' safety is at the center of everything we do
- Innovative – Foster an appetite for innovation and creativity

By following these tenets, Superior Glove has grown into one of the world's leading manufacturers of safety gloves and apparel. Still run by members of the Geng family, our focus on family, worker safety, and innovation remains central to everything we do.

**FAMILY ENVIRONMENT**

Founded in 1910 as the Acton Glove Company, Superior Glove has always been a family-run business – but the family aspect doesn't stop at ownership. Frank Geng's philosophy was to treat all employees as if they were family and create an engaging environment for all workers from the president to the janitor.

In fact, one of our most successful manufacturing facilities was created to retain a homesick employee. Hailing from Newfoundland, an employee working at Superior Glove's headquarters in Acton, Ontario in the 1980s

(at that time the only location) decided that although he loved his job, he missed his home too much and was going to move back. Not one to let a hard-working, loyal employee go so easily, Frank Geng ventured out east to see this employee's home in Newfoundland and saw an opportunity to both keep the employee and grow the business. Today, we have two manufacturing plants based in Newfoundland where many of our top-selling gloves and sleeves are made. And the employee who started it all? He's still a proud member of the Superior Glove team!

**WORKER FOCUSED**

Everything we do is in pursuit of our mission to drive workers' safety through innovation. Every glove, sleeve, and piece of safety apparel we produce is designed with the end-user in mind, and at the forefront of that design is keeping the end-user safe and comfortable.

Many of our best-selling products are the result of innovation while solving safety issues for workers. Whether it be reducing a glove's bulkiness without compromising on protection or innovating

**Superior Glove Works Ltd.**

protection that never existed before, if it will help keep workers safe, we'll pursue it.

**INNOVATIVE**

Known for our industry-leading, cut-resistant fibers, our commitment to continuous improvement has always kept our products on the cutting edge of technology. From the engineering of fibers to the final stitches, we control the entire supply chain, giving us complete control and autonomy over the quality of our products.

### About Us

At Mezzanine Safeti-Gates we've been focused on providing high quality fall protection solutions to our customers. We started with the original dual-gate system, the Roly® Safety Gate and never looked back. Over the last 36 years, our proactive pallet drop safety gates have been installed in thousands of distribution centers, warehouses and manufacturing facilities throughout the world.

Our OSHA and ANSI compliant safety gate models provide employees working on elevated areas with fall protection. The designs are ideal to secure pallet drop areas on multi-level pick modules, pallet flow lanes, mezzanines, loading docks, lifts — basically any elevated area on which employees work. We offer a line of safety gates models that not only provide fall protection, but also keep operations efficient - and we specialize in custom design so if there is a complicated application or area, we will create something to help you make it safe.

**Mezzanine Safeti-Gates, Inc.**  
174 Western Avenue  
Essex, MA 01929  
978-768-3000  
[www.MezzGate.com](http://www.MezzGate.com)

Many of our safety gate models can be designed to feature touch-free operation when power and technology like radio frequency controls are added. Not only does a touchless system provide added employee hygiene and improved ergonomics, all technology used with our safety gates is designed to help our customers speed operations, especially those that incorporate AGVs and lift trucks, without compromising safety. We customize technology integration options to fit each customers' unique needs.

Power and technology are not the only custom options with our standard safety gate models. You can choose the material, paint colors and dimensions beyond our standard single and double-wide sizes. We offer designs for rack supported structures, pallet flow lanes, applications with chain hoists or very tall pallet loads and more. Safety gate models for loading docks and lifts can be configured in various designs and customized to automatically open and close.

Let us help you determine the best safety gate design equipped with the right technology for your application. Our 35+ years of experience providing fall protection and six patents for safety gate designs have prepared us to

be able to assist you no matter the application. We look forward to making your facility safer.

**About Us**

Pfannenberg, Inc. is a global manufacturer of Thermal Management, Liquid Cooling Solutions and Signaling Technologies.

**Pfannenberg, Inc.**

1-866-689-0085

[www.pfannenbergusa.com](http://www.pfannenbergusa.com)

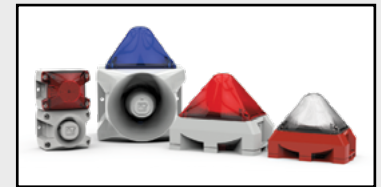

## Why Pfannenberg is a leader in the Audible and Visual Signal Space

For over 50 years Pfannenberg has developed technically superior signaling devices. Pfannenberg's core purpose is "Protecting people, machines, and the environment". As signaling safety experts we've always felt that safety begins with understanding the situation. You need to know the space being covered, standards or codes to be met, the type of event

(Alarm – Imminent Danger, Warning – Impending Danger, Indicate – Process Notification) and the detailed performance characteristics of visual and audible signaling devices needed to ensure the safety of personnel within the space. This Pfannenberg innovation is "3D-Coverage". With this, Pfannenberg is the first company to offer a reliable statement about **spatial** product performance. Both customers and system specifiers will greatly benefit from Pfannenberg's 3D-Coverage, which creates transparency for signaling product performance, resulting in more efficient solutions and planning security right from

the beginning. Now, with both technically advanced products and an all-inclusive approach for establishing performance criteria, planners can easily compare signaling devices to ensure truly capable performance. With worldwide reach, Pfannenberg is well positioned to offer consultation, rapid product delivery, and after sale services to ensure the success of your next safety requirement. From ordinary to complex, our extensive legacy of successful signaling deployments has given us the experience to address your every need. Please contact us to find out how we can help you plan your next signaling project.

**About Us**

Safety Rail Company makes OSHA-compliant fall protection safety railings and guard rail systems that are durable and innovative, but still affordable. With years of industry experience, our fall protection products are engineered first and foremost to save lives!

**Safety Rail Company**

4244 Shoreline Drive

Spring Park, MN 55384

888-434-2720

[sales@safetyrailcompany.com](mailto:sales@safetyrailcompany.com)

[www.safetyrailcompany.com](http://www.safetyrailcompany.com)

Safety Rail Company, Spring Park, Minnesota is the premier manufacturer of fall protection railing systems for industrial/ commercial applications. We manufacture Mobile and Permanent Safety Rail, Skylight and Roof Hatch Guards, Safety Gates, Warning Line Systems, Ladders and more.

We offer high quality 100% made in the USA fall protection solutions coupled with exceptional service and support. The core of Safety Rail Company's solution is found in products that engineer away the fall hazard. Products that are effective at preventing falls for everyone, not just trained personnel. Products that give piece of

mind such as the SRC360 Mobile Safety Rail System. The SRC360 railing system is a free-standing, OSHA compliant, passive fall-protection system designed to be used at or around leading-edge fall hazard areas to prevent workers from being exposed to fall hazards. In OSHA's hierarchy of controls, engineered solutions are the most favored course of preventative action over implementing some sort of administrative or personal protective equipment (PPE) protocol for controlling worker exposures in the workplace. Passive barrier systems such as the SRC360 Mobile Railing System, are designed to isolate the hazard, before the worker is exposed to it. The

SRC360 railing system utilizes weighted cast iron base plates and railings to act as a physical barrier around workplace safety hazards. Once installed, workers have complete freedom of movement behind the barrier which not only increases productivity, but it eliminates any concern for workers circumventing PPE or administrative controls. When installed permanently, the SRC360 Mobile railing system is always in place, always protecting everyone that enters the hazard zone. To find out more information, call the Safety Rail Company at (888) 434-2720 or visit our website at [www.safetyrailcompany.com](http://www.safetyrailcompany.com).

## Safety Rail Company

**About Us**

Trelleborg Wheel Systems offers highly specialized solutions to create added value for customers and is partner of the leading Original Equipment Manufacturers.

Trelleborg Wheel Systems  
[www.trelleborg.com](http://www.trelleborg.com)

Trelleborg Wheel Systems is a leading global supplier of tires and complete wheels for off-highway vehicles such as agricultural machines, material handling and construction vehicles, and specialty applications. Trelleborg engineers, produces and distributes a wide range of material handling tires including solid resilient, press-on, pneumatic, polyurethane and wheels.

Safety is top priority among our products. Trelleborg tires are engineered to meet the key requirements of today's materials handling equipment.

## Tires That Keep the Material Handling Industry Moving

Our tires provide the best all-round performance – meaning less down-time, and more productivity. We believe a safe fleet is a successful fleet.

## Behind Every Tingley Product is More Than 120 Years of Quality and Excellence

### About Us

For over 120 years we make sure you get where you want to go by keeping you safe on the job.

**TINGLEY**  
est. 1896

**Tingley Rubber USA**  
800-631-5498  
[www.tingleyrubber.com](http://www.tingleyrubber.com)

Because you're tough and hard-working... we need to be, too.

We understand that you work hard, often in tough conditions. Your work is as demanding as

it is important and you deserve to be safe, comfortable and protected in any environment.

Mud, rain, chemicals, traffic, wind, darkness – the elements and hazards are no match for the durability, reliability and protection that Tingley boots and apparel provide.

Tingley has been protecting generations since its founding by Charles O. Tingley in 1896. From its humble beginnings as a bicycle tire plug company, this U.S.-based, 5th generation family business has innovated and grown to offer a full line of

protective, liquid proof footwear and clothing.

From the first rubber overshoe and the first Hazmat boots to exterior-coated polyurethane protective clothing with sealed seams, Tingley has been and will continue to be a leader in innovation and protection.

**Hard work never goes out of style.**

### About Us

ZOLL Medical Corporation, an Asahi Kasei Group Company, develops and markets medical devices and software solutions that help advance emergency care and save lives, while increasing clinical and operational efficiencies.

**ZOLL**

**ZOLL Medical Corporation**
